Please cancel claim 2, without prejudice or disclaimer of its subject matter, and amend

claim 1 as indicated below. This listing of claims will replace all prior versions and listings of

claims in the application:

**LISTING OF CLAIMS:** 

1. (Currently Amended) A particle producing method comprising:

introducing a carrier gas into a reaction container;

heating an inside of the reaction container; and

introducing a source gas and a reaction inhibitor generating gas into the reaction

container,

wherein the source gas produces particles in the reaction container by a thermal

decomposition reaction, and

wherein the reaction inhibitor generating gas produces an inhibition component, which

inhibits the thermal decomposition reaction with the particles used as a catalyst.

2. (Canceled)

3. (Original) The particle producing method according to claim 1, wherein the reaction

inhibitor generating gas includes hydrogen and carbon dioxide.

-3-

Application Number: 10/695,788

Filing Date: October 30, 2003

Attorney Docket Number: 07906.0019

4. (Original) The particle producing method according to claim 1, wherein diameters of

the particles are controlled in accordance with an amount of the reaction inhibitor generating gas

introduced into the reaction container.

5. (Original) The particle producing method according to claim 1, wherein the source

gas includes Fe(CO)<sub>5</sub>.

6. (Original) The particle producing method according to claim 1, wherein the source

gas includes Co<sub>2</sub>(CO)<sub>8</sub>.

7. (Original) The particle producing method according to claim 1, wherein the source

gas includes Ni(CO)4.

8. (Original) The particle producing method according to claim 1, wherein the carrier

gas includes nitrogen.

9. (Original) The particle producing method according to claim 1, wherein the carrier

gas is an inert gas.

10. (Original) The particle producing method according to claim 1, further comprising:

determining ratio of the source gas to the reaction inhibitor generating gas in a flow rate

to control an average diameter of the particles.

-4-

Application Number: 10/695,788 Filing Date: October 30, 2003

Attorney Docket Number: 07906.0019

11. (Original) The particle producing method according to claim 1, wherein the reaction

container is heated at a center part thereof in a carrier gas flowing direction.

12. (Original) A particle producing method comprising:

pyrolyzing a source gas to produce particles; and

producing an inhibition component, which inhibits the pyrolyzing, from a reaction

inhibitor generating gas with the produced particles used as a catalyst.

13. (Original) The particle producing method according to claim 12, wherein the

reaction inhibitor generating gas includes hydrogen and carbon dioxide.

14. (Original) The particle producing method according to claim 12, wherein the source

gas includes Fe(CO)<sub>5</sub>.

15. (Original) The particle producing method according to claim 12, wherein the source

gas includes Co<sub>2</sub>(CO)<sub>8</sub>.

16. (Original) The particle producing method according to claim 12, wherein the source

gas includes Ni(CO)4.

17. (Original) The particle producing method according to claim 12, further comprising:

-5-

Application Number: 10/695,788

Filing Date: October 30, 2003

Attorney Docket Number: 07906.0019

determining ratio of the source gas to the reaction inhibitor generating gas in a flow rate

to control an average diameter of the particles.

18. (Withdrawn) A particle producing apparatus comprising:

a reaction container;

an introduction portion provided at one end of the reaction container, the introduction

portion through which a source gas, a reaction inhibitor generating gas, and a carrier gas are

introduced into the reaction container;

a heater provided on an outer wall of the reaction container;

an exhaust portion configured to exhaust the carrier gas and produced particles from the

other end of the reaction container;

a cooler configured to cool the produced particles exhausted from the exhaust portion;

and

a storage portion configured to store the produced particles from the cooler.

19. (Withdrawn) The particle producing apparatus according to claim 18, wherein the

reaction inhibitor generating gas includes hydrogen and carbon dioxide.

-6-
